

Creating a **PHP e-commerce project** involves implementing a wide range of features to ensure smooth operations, a good user experience, and secure transactions. Here's a comprehensive list of **core and advanced functionalities** you should include:

Core Functionalities

1. User Module

- User registration and login (with password hashing)
- Forgot password (email or OTP-based reset)
- User profile management
- Address book (shipping/billing addresses)
- Order history and tracking
- Wishlist/favorites

2. Product Module

- Add/Edit/Delete products (Admin)
- Product categories and subcategories
- Product search and filters (by category, price, rating, etc.)
- Product details page
- Product variants (size, color, etc.)
- Stock management (inventory tracking)

3. Shopping Cart

- Add/Remove items from cart
- Update quantity
- View cart summary
- Save cart for later
- Cart persistence using session/cookies

4. Checkout & Orders

- Shipping address form
- Order summary
- Apply promo codes or discounts
- Place order (with confirmation)
- Order status updates (pending, shipped, delivered)

5. Payment Integration

- Cash on delivery
 - Online payments (integrate with PayPal, Stripe, Razorpay, etc.)
 - Secure transaction handling (HTTPS, input sanitization)
-

Admin Panel Features

6. Dashboard

- Sales overview
- Total customers, orders, revenue
- Recent orders

7. Product Management

- Add/edit/delete products
- Upload images (multiple)
- Manage stock
- Manage categories/brands/tags

8. Order Management

- View/manage all orders
- Change order status
- View order details

9. User Management

- View registered users
- Block/unblock users

10. Coupons/Discounts

- Create/edit/delete coupon codes
- Apply rules (min amount, expiry, etc.)

11. Content Management

- Manage pages (About Us, Contact Us, Terms)
 - Manage banners/sliders
-

Advanced Functionalities (Optional for MVP, but good to have)

12. Product Reviews and Ratings

- Users can leave reviews and rate products

- Admin moderation of reviews

13. Email Notifications

- Send order confirmation, shipping updates, password reset
- Admin notifications for new orders

14. Search & SEO

- Full-text search
- SEO-friendly URLs (slugs)
- Meta tags for products/pages

15. Reports & Analytics

- Sales reports (by day/week/month)
- Best-selling products
- Customer segmentation

16. Multi-language & Currency (Optional)

- Language switcher
- Currency conversion

Security Considerations

- CSRF protection
- SQL Injection prevention (use PDO or MySQLi with prepared statements)
- XSS protection
- HTTPS for payment and login
- Input validation/sanitization

Suggested Folder Structure

/project-root

└─ /admin

└─ /cart

└─ /checkout

└─ /includes

└─ /assets

| └─ /css

```
|  ├── /js
|  └── /images
├── /products
├── /users
├── index.php
├── config.php
└── .htaccess
```

Would you like me to provide a **feature-wise breakdown with code examples**, or a **project roadmap with milestones** to start building step-by-step?
